

100 Years ago in The American Mathematical Monthly

The address on “Graduate mathematical instruction for graduate students not intending to become mathematicians” delivered by Professor C. J. KEYSER before Section A of the American Association is printed in full in *Science* for March 26. His theme is the desirability and feasibility of organizing in every university a course such that an advanced student, while specializing in some other field, may yet gain a general knowledge of mathematical problems and processes.

Professor W. J. Hussey, of the department of astronomy in the University of Michigan, who has been for the past six months at La Plata University, has now returned to Ann Arbor.

In *School and Society* for March 27, 1915, Professor G. A. MILLER has an interesting article on “Shamelessness in regard to mathematical ignorance.”

Excerpted from “Notes and News” **22** (1915) 175-178.
