List of Definitions	ix
Foreword	xv
1 Mathematical Definitions	1
1.1 The Role of Definitions	2
1.2 Evens and Odds	6
1.3 Some Important Definitions	9
1.4 Exercises	14
2 Propositional Calculus	17
2.1 Basic Operators	17
2.2 Truth Tables	23

2.3	Additional Operators	27
2.4	Exercises	29
3	Semantics	33
3.1	Introduction to Semantic Theorems. . .	34
3.2	Important Semantic Theorems	37
3.3	Proving Implications	39
3.4	Exercises	45
4	Predicate Calculus	49
4.1	Inductive Reasoning	51
4.2	Proving Quantified Propositions	55
4.3	Multiple Quantifiers	58
4.4	Exercises	62
5	Proofs	67
5.1	Proof Techniques	68
5.2	More Proof Techniques	71
5.3	Proofs with Floors and Ceilings	77
5.4	Exercises	79
6	Proof by Induction	83
6.1	Induction Examples	85
6.2	Intermediate Induction	88
6.3	Advanced Induction	93
6.4	Exercises	99
7	Sequences and Recurrences	103
7.1	Solving Recurrences	105
7.2	Big O Notation	109
7.3	Master Theorem	113
7.4	Exercises	116

8	Set Theory I	121
8.1	Set Equality and Containment	125
8.2	Set Operations	128
8.3	Set Properties	131
8.4	Exercises	134
9	Set Theory II	137
9.1	More Set Operations and Properties. . .	138
9.2	Cartesian Products	143
9.3	Infinite Sets	146
9.4	Exercises	151
10	Relations	155
10.1	Examples	156
10.2	Properties	158
10.3	Operations	163
10.4	Exercises	167
11	Equivalence Relations	171
11.1	Examples	171
11.2	Modular Arithmetic	174
11.3	Equivalence Classes	179
11.4	Exercises	183
12	Posets	187
12.1	Examples and Hasse Diagrams	187
12.2	Properties and Operations	192
12.3	Chains and Antichains	196
12.4	Exercises	199
13	Functions	203
13.1	Totality and Definiteness	204

13.2 Basic Properties of Functions	207
13.3 Function Composition	213
13.4 Exercises	216
Appendix: Details of the Entry Point	221
Hints to Selected Exercises	225
Acknowledgements	235
Index	237
Document Revision History	247
